

Scenario Registry

| Sc.  | Domain              | Channel          | Material     | Substitution                              | .    | Regime                   |
|------|---------------------|------------------|--------------|-------------------------------------------|------|--------------------------|
| Sc1  | Final Demand        | HH Consumption   | Food         | Meat processing → Other food products     | 0.20 | Production Leakage       |
| Sc2  | Final Demand        | HH Consumption   | Energy       | Fossil-fuel electricity → Renewables      | 0.20 | Fossil Import Collapse   |
| Sc3  | Final Demand        | HH Consumption   | Wood         | Virgin wood → Wood re-processing          | 0.20 | Symmetric Contraction    |
| Sc4  | Final Demand        | Gov. Consumption | Plastics     | Virgin plastics → Plastics re-processing  | 0.20 | Production Leakage       |
| Sc5  | Final Demand        | Firm Investment  | Construction | Construction → Construction re-processing | 0.05 | Construction Rebound     |
| Sc6  | Final Demand        | Firm Investment  | Metal        | Primary metals → Metals re-processing     | 0.20 | Symmetric Contraction    |
| Sc7  | Intermediate Demand | Firm Production  | Wood         | Virgin wood → Wood re-processing          | 0.20 | Symmetric Contraction    |
| Sc8  | Intermediate Demand | Firm Production  | Pulp         | Virgin pulp → Pulp re-processing          | 0.20 | Symmetric Contraction    |
| Sc9  | Intermediate Demand | Firm Production  | Plastics     | Virgin plastics → Plastics re-processing  | 0.20 | Production Leakage       |
| Sc10 | Intermediate Demand | Firm Production  | Metal        | Primary metals → Metals re-processing     | 0.20 | Competitive Displacement |
| Sc11 | Intermediate Demand | Firm Production  | Glass        | Virgin glass → Glass re-processing        | 0.20 | Symmetric Contraction    |
| Sc12 | Intermediate Demand | Firm Production  | Cement       | Cement → Clinker re-processing            | 0.20 | Symmetric Contraction    |
| Sc13 | Intermediate Demand | Firm Production  | Energy       | Fossil-fuel electricity → Renewables      | 0.20 | Fossil Import Collapse   |
| Sc14 | Intermediate Demand | Firm Production  | Construction | Construction → Construction re-processing | 0.05 | Construction Rebound     |

. = substitution intensity parameter (share of primary demand shifted to secondary sector per period). HH = Household. Gov. = Government.

Transmission regimes defined by the pattern of EU-RoW cross-border spillovers (see Figure 10).
